CHIRTUNG

EMERGENCY

Small scale project to help Chirtung community to fix the pipeline and water tank at the source destroyed by a landslide and provide access to a healthy and dignified water supply to avoid early childhood problems and other diseases among vulnerable people.

PROJECT INFORMATION

Chirtung - Nepal

Objective 2500€ reached 880€

7 donnors

Crowdfunding period August - October'22

Dear donors,

Thanks to your contributions we were able to respond this emergency despite of not reaching the crowdfunding objective. We started the works in benefit of 217 people at Chirtung community, being able to fix the water source and manage a provisional pipeline to supply the village with drinkable water. The following works are pending to complete the project successfully:

- Intake building at the source
- Pipe for the community distribution
- Water tank at the community
- Gate ball and other fitting materials to be purchased

We really hope to reach more funding sources soon in order to complete the project before the next rainy season. Feel free to contact us if you find some possibilities to complete this necessary project.

In the next page you could find some pictures of the current situation and works done because of your kindness.

Thanks very much!

United Community Team
